

CSC 424: Advanced Data Analysis
Wednesday 5:45PM-9:00PM

Instructor Information

Instructor: Dr. John McDonald
Office: CST, Room 831
Office Hours: Monday, 3:30pm-5:00pm
Wednesday, 3:30pm-5:00pm
Phone: (312) 362-5775
Email: jmcdonald@cdm.depaul.edu
Course page: <http://d2l.depaul.edu>

Course Description

The course will teach advanced statistical techniques to discover information from large sets of data. The course topics include visualization techniques to summarize and display high dimensional data, dimensional reduction techniques such as principal component analysis and factor analysis, clustering techniques for discovering patterns from large datasets, and classification techniques for decision making. The methods will be implemented using standard computer packages.

Course Goals

At the end of this course, the student should have a basic understanding of the following topics and be able to identify which approach is appropriate for a given data set and data analysis task to be performed:

- Multivariate linear regression (least-square estimation & normal equations, model building & variable selection)
- Principal component analysis & Factor analysis (Eigen-values and eigenvectors, scree plots, dimension reduction, factor rotation)
- Canonical Correlation (to assess the relationship between two sets of variables)
- Discriminant analysis (Fisher's discriminant function)
- Cluster analysis (similarity measures, hierarchical clustering & non-hierarchical clustering).
- Multidimensional Scaling (if time permits)

Highly Recommended Books

- Johnson & Wichern, "Applied Multivariate Statistical Analysis", Published by Prentice Hall, ISBN-13: 9780131877153, 2008 (6th edition).
- Hair, Black, Babin, & Anderson, "Multivariate Data Analysis", Published by Prentice Hall, ISBN-13: 9780138132637, 2010 (7th edition).

Prerequisites

CSC423: Data Analysis and Regression. We also assume that you have had some experience in linear algebra and in particular, matrix arithmetic.

Grading

Grading in this course will be based on a combination of homework, programming and participation assignments, periodic quizzes, the midterm exam, which will be held during the 6th week of class, and the final project. The final grade will be computed based on the following weights:

- Homework/programming assignments and quizzes: 30%,
- Midterm exam on February 7th: 35%
- Final project due on March 14th: 35%

The midterm exam is mandatory and you must take it to pass the course. Makeup exams/quizzes are only given in extreme circumstances (severe illness, etc.) which must be documented. If there is a chance that work or other commitments will cause you to be absent for one of these, you should enroll in the online section, as it gives more flexibility in terms of date and time for the exam.

Homework/Programming Assignments, Papers' Reviews, and Exam Policies

Homework/programming assignments

There will be homework/programming assignments, which are due at the beginning of class one or two weeks after they are assigned. Late assignments will be accepted up to one lecture later than the assigned due date with a 20% penalty. No assignments will be accepted beyond a week after the due date. The assignments must be submitted online at <https://d2l.depaul.edu>. No assignments will be accepted via e-mail.

Midterm:

There will be a midterm exam given on Wednesday, May 8th. The midterm is a closed book and notes exam, but students are allowed to bring a calculator (no phones or internet connected devices are allowed).

The Final Project:

The final project will be a group project with at three to four students to a project. The project will be to thoroughly analyze and apply course techniques to a large dataset. You will be expected to apply a range of techniques from the course and from your own readings to the data, and to draw conclusions from your analysis. Your grade in the project will be based on both individual (40%) and group (60%) performance, including the following components

- Periodic milestones throughout the quarter which will entail both group and individual work
- Minutes of all team meetings documenting your discussions
- A group final summary report for which all members are expected to contribute
- An individual final report detailing your contributions and individual investigations in the project
- Peer evaluations

The groups will be formed in the first three weeks of the class. Group dynamics play an important role in any project, and you are expected to make every effort to both contribute to the group effort and make the environment safe, comfortable and respectful for your team members.

Final projects will be presented on the 10th week of class, Wednesday, June 5th. Each group must present their projects. Online students are encouraged to participate either through helping to build the presentation or by recording a part of the presentation to be played during the presentation.

Non-performance as a team-member on a project

Usually, the peer evaluation and documentation, including the meeting minutes, in addition to an overall desire for excellence, is sufficient motivation for individuals to contribute a fair share to the team project. However, in extreme cases, individuals have been known to completely cease contributing to a team project. If this is the case, a team has the right to notify the instructor that the individual is no longer contributing and the team no longer wants the individual on the team.

This is not a decision to be made lightly, as expulsion from a team will result in the **loss of 40% of the final project grade**. Because this is such a serious decision, any team that makes this decision will also experience a point deduction. In this situation, **each remaining team member will lose 10% of the final project grade**.

For online students:

Online students must schedule their final exam on the D2L website (<https://d2l.depaul.edu>) during the time frame specified by your instructor. Students living within the Chicago land area are considered local and will be expected to take their exams at a DePaul University campus. Time slots vary by campus and day. Given the number of students in the in-class section, there may not be room to allow online students to take the exam with the other in-class students. Online students living outside the Chicago land area (remote) will have their exams administered by a qualified proctor. You will need to find an acceptable proctor in your area before you register for your exam.

What to Expect

As with any course in mathematics and computer science, you are expected to spend a significant amount of time outside of class reviewing lectures and working on homeworks/projects. The best way to learn mathematical or statistical techniques is to experiment with them on a variety of problems. You will, of course, have a range of problems posed on the homeworks, but the more you can experiment with these techniques on both real and synthetic datasets, the better you will learn their nuances, and the better prepared you will be to apply them in novel situations.

The topics in this course build on each other, much in the same way as in any programming or math course. Be sure to monitor your progress carefully in this course and come see me immediately if you miss a class or start to fall behind so that we can discuss getting you caught up.

This is a graduate level class and you are expected to be an independent learner. This course is not a tutorial in a specific software package, rather it is teaching the fundamentals of data visualization that may be applied in building visualizations on any software platform. Introduction to software techniques will be taught as in-class demonstrations, but techniques required for the homework may build on those that are explicitly taught in class. Further, the class will not be taught in a lab and there may not be time to answer all individual questions or look through individual code during class. You are expected to work through class examples at home and make sure that you can both understand and use the techniques covered. There are a wide range of resources available to you for aid including my office hours, the D2L discussion forums, and a wealth of knowledge in online blogs and examples that can help you work through error messages or issues that you may be having.

Software

The use of the RStudio statistical system will be taught in class and will be required for some homework problems. It will be the only officially supported platform for the course. However, many of the homework problems and the final project will allow you to use any software you wish to complete the analysis (e.g. SPSS, SAS, R, etc.) as long as the software has sufficient features to complete the assignment/project and produces output equivalent to the software shown in class. You may use more than one software package to work on your final project. Different packages have different strengths and you should learn to leverage each package for its strengths.

E-Mail questions

While you will have online discussion forums for asking questions of other students, if you have a question for me, you should e-mail me directly. I get a lot of e-mail each week and to help insure that you get a prompt response from me, you are required to preface each e-mail's subject line with **CSC424:<subject>** (note: capital letters on CSC and no space). **If you do not do this, you may not get a response to your e-mail.**

Attendance

It is expected that you will attend every class; it is the single most important action you can take in mastering the course objectives. You are responsible for all material covered, assignments delivered or received, and announcements made in class sessions that you miss. For distance learning students, this

means viewing the classes in a timely manner, participate in the discussion forums, and being sure to email or call in any questions that you have.

For online students:

Recordings of each lecture will be available a few hours after the “live” class, and can be found at the course website <https://d2l.depaul.edu>. Online students are expected to watch the lectures every week and to keep up with the course information posted on the course website.

Changes to Syllabus

This syllabus is subject to change as necessary to better meet the needs of the students. Significant changes are unlikely, and will be thoroughly addressed in class. Minor changes, especially to the weekly agenda, are possible at any time. You will be informed of all such changes.

School policies:

Attitude and Civil Discourse:

A professional and academic attitude is expected throughout this course. Measurable examples of non-academic or unprofessional attitude include but are not limited to: talking to others when the instructor is speaking, mocking another’s opinion, cell phones ringing, emailing, texting or using the internet whether on a phone or computer. If any issues arise a student may be asked to leave the classroom. The professor will work with the Dean of Students Office to navigate such student issues.

DePaul University is a community that thrives on open discourse that challenges students, both intellectually and personally, to be [Socially Responsible Leaders](#). It is the expectation that all dialogue in this course is civil and respectful of the dignity of each student. Any instances of disrespect or hostility can jeopardize a student’s ability to be successful in the course. The professor will partner with the Dean of Students Office to assist in managing such issues.

Cell Phones/On Call:

If you bring a cell phone to class, it must be off or set to a silent mode. Should you need to answer a call during class, students must leave the room in an un disruptive manner. Out of respect to fellow students and the professor, texting is never allowable in class. If you are required to be on call as part of your job, please advise me at the start of the course.

Online Instructor Evaluation

Course and instructor evaluations are critical for maintaining and improving course quality. To make evaluations as meaningful as possible, we need 100% student participation. Therefore, participation in the School’s web-based academic administration initiative during the eighth and ninth week of this course is a requirement of this course. Failure to participate in this process will result in a grade of incomplete for the course. This incomplete will be automatically removed within seven weeks after the end of the course and replaced by the grade you would have received if you had fulfilled this requirement.

Email

Email is the primary means of communication between faculty and students enrolled in this course outside of class time. Students should be sure their email listed under "demographic information" at <http://campusconnect.depaul.edu> is correct.

Academic Integrity Policy

I expect that you have read and understood DePaul’s policy on Academic Integrity: <http://academicintegrity.depaul.edu/> It is part of this syllabus; follow it.

Plagiarism

The university and school policy on plagiarism can be summarized as follows: Students in this course, as well as all other courses in which independent research or writing play a vital part in the course

requirements, should be aware of the strong sanctions that can be imposed against someone guilty of plagiarism. If proven, a charge of plagiarism could result in an automatic F in the course and possible expulsion. The strongest of sanctions will be imposed on anyone who submits as his/her own work a report, examination paper, computer file, lab report, or other assignment which has been prepared by someone else. If you have any questions or doubts about what plagiarism entails or how to properly acknowledge source materials be sure to consult the instructor.

Incomplete

An incomplete grade is given only for an exceptional reason such as a death in the family, a serious illness, etc. Any such reason must be documented. Any incomplete request must be made at least two weeks before the final, and approved by the Dean of the School of Computer Science, Telecommunications and Information Systems. Any consequences resulting from a poor grade for the course will not be considered as valid reasons for such a request. Students must formally request an incomplete by filling out a Request for Incomplete Grade form, available at the CDM main office, and submitting it to me.

Resources for Students with Disabilities

Students who feel they may need an accommodation based on the impact of a disability should contact the instructor privately to discuss their specific needs. All discussions will remain confidential. To ensure that you receive the most appropriate accommodation based on your needs, contact the instructor as early as possible in the quarter (preferably within the first week of class), and make sure that you have contacted either:

PLuS Program (for LD, AD/HD) at 773-325-4239 in SAC 220

The Office for Students with Disabilities (for all other disabilities) at 773-325-7290 Student Center 307
