

CSC 373 - 601/610 Computer Systems I

Spring 2021 - 2022

Overview

This course is the first of a two-course sequence covering the concepts underlying all computer systems and how they affect the correctness, performance, and utility of application programming. This course introduces C programming and focuses on machine representation of information and programs.

Instructor

Professor: Zhen Huang

Office: Room 735, CDM Center, DePaul University

Phone: (312) 362-8239

Email: zhen.huang@depaul.edu

Homepage: <https://facsrv.cs.depaul.edu/~zhuang28>

I will reply to all student emails, discussion forum messages, and voice mails within one business day. Please ensure you put "CSC 373" in the subject line of your email.

Course format

CSC 373-610 is an online asynchronous section. CSC 373-601 is an in-person section. To provide optimal experience for students in both sections, this course will be delivered as follows:

- **Course website:** The course website is on D2L. It hosts the lecture slides, the asynchronous lecture videos, the live lecture recordings, and the homework/lab assignments. Please check the course web page and the discussion forum regularly.
- **Asynchronous lecture videos:** The asynchronous lecture videos are pre-recorded and posted on the course website. They are designed to provide the best experience for students in both sections.
- **In-person lectures:** The in-person lectures for students attending the in-person section are held in CDM 202 in two sessions weekly:
 - 1:30pm - 3:00pm on Tuesdays
 - 1:30pm - 3:00pm on Thursdays

The in-person lectures will cover the same materials as the asynchronous lecture videos of the same weeks. The in-person lectures will be recorded and posted on the course website.

- **Synchronous zoom meetings:** I will hold 60-minute synchronous zoom meetings for students in the online section from 10:30am to 11:30am on Thursdays. In the synchronous zoom meetings, I will review the homework assignments and labs due that week. The synchronous zoom meetings will be recorded and posted on the course website. Attending the synchronous zoom meetings are optional.
- **Discussion forum:** I have set up a Discord server as the discussion forum for the class. Please use it to ask questions relevant to the class. I encourage you to answer the questions of other students. The Discord server invite is posted on D2L. I am also available for one-on-one meetings during my virtual office hours. If you need to contact me outside of office hours, feel free to email me directly.

Office hours

My office hours are held via zoom meetings in two sessions:

- 9:30am - 11:30am on Tuesdays
- 3:30pm - 4:30pm on Tuesdays

The link to the zoom meetings is posted on the course website.

Please make use of my office hours. Asking questions about the assessments, course notes, or the readings can improve your understanding enormously. It will also let me know if I need to review a topic with the class. If you want to talk to me during my office hours but are unable to do so for any reasons, please contact me to make an appointment outside those hours.

Prerequisites

You must have taken CSC 393 or CSC 300, and MAT 140. I will assume that:

- You know how to create, debug, compile and run programs in a general-purpose language (Python, Java, C, C++,...) and use a reasonable programming style (i.e. your code is easy to read and concise).
- You know how to use basic data types (integer, boolean, and string) including fundamental container data types (arrays or lists).
- Your are familiar with execution control structures such as if/else, for, and while statements.
- You are familiar with basic formal logic.

Learning goals

After the successful completion of this course:

- you will have basic C programming skills;
- you will understand how integers, strings, arrays and other structures are represented and manipulated at the machine level;
- you will understand how programs are represented at the machine-level;
- you will be able to read, understand, and debug 64-bit Intel Assembly code in GAS (GNU Assembler) format;
- you will know how to take advantage of the parallelism in modern CPUs to optimize program performance;

Course calendar

The following gives all the important dates for this course. The topics covered are subject to change.

Week	Date	Topic/Deadline
1	Monday, March 28 — Sunday, April 3	Intro to computer systems, UNIX, and C
2	Monday, April 4 — Sunday, April 10	Machine representation of data
	Friday, April 8	<i>The last day to drop classes with no penalty</i>
3	Monday, April 11 — Sunday, April 17	Integer arithmetic
4	Monday, April 18 — Sunday, April 24	C arrays, strings, pointers, and structures
5	Monday, April 25 — Sunday, May 1	Midterm exam , Intro to machine representation of programs
6	Monday, May 2 — Sunday, May 8	Machine representation of programs
7	Monday, May 9 — Sunday, May 15	Arithmetic and logical operations; control
	Friday, May 13	<i>Last day to withdraw from classes</i>
8	Monday, May 16 — Sunday, May 22	Procedures; arrays and pointers; buffer overflow
9	Monday, May 23 — Sunday, May 29	Intro to optimizing program performance
10	Monday, May 30 — Sunday, June 5	Optimizing program performance
11	Monday, June 6 — Friday, June 10	Final exam

Textbooks

Bryant & O'Hallaron, *Computer Systems: A Programmer's Perspective, 3rd Edition*, Prentice Hall/Pearson, 2016. ISBN: 9780134092669

Kochan, *Programming in C, 4th Edition*, Prentice Hall/Pearson, 2015. ISBN: 9780321776419

Grading policy

Course assessments include homework assignments, quizzes, lab projects, a midterm, and final exam. The course grade will be computed as follows:

Assessment	Percentage
Homework assignments	16 %
Quizzes	10 %
Lab projects	24 %
Midterm exam	25 %
Final exam	25 %

The final grade in the course will be determined according to the standard D2L grading scheme:

A	95-100%	C	73-76%
A-	91-94%	C-	69-72%

B+	88-90%	D+	65-68%
B	85-87%	D	61-64%
B-	81-84%	F	<61%
C+	77-80%		

I will grade your submitted work within 7 days of the due date. To do well in this course, you should follow the class regularly, participate in the discussion, read the chapters in the book each week as indicated in the homework assignments, start working on the homework and labs early, and talk to me promptly if you have any problems. The answers to the homework and exam questions, as well as your code, should be written in a way that is rigorous, clear and concise.

Homework assignments

There will be a total of 5 homework assignments, but only your best 4 count toward the final grade, so you may miss one homework with no penalty. Each homework assignment will consist of several short programming assignments, and/or conceptual problems.

Quizzes

There will be 5 quizzes that focus on conceptual questions and test on basic skills. The quizzes are in the form of D2L quizzes composed of multiple-choice questions, short-answer questions, matching questions, and filling-the-blank questions. For each quiz, you can choose a time to take it in a period of 3 days specific to the quiz.

Lab projects

There will be a total of 3 labs, each a *major* assignment involving long hours of technical work.

All homework assignments and labs are to be submitted to a course Linux server. The details on how to make the submissions are described in the document for each assignment and lab on the course web page on D2L. All homework assignments and labs must be submitted by the deadline and no later. Any homework or lab not handed in by the deadline will receive 0 points, without any exceptions.

Midterm and final exams

Both the midterm exam and the final exam are in the form of D2L quizzes. Students in the in-person section will take the midterm exam from 1:30pm to 3:00pm on April 26, and the final exam from 11:30am to 1:45pm on June 9, both in a CDM computer lab. Students in the online section need to take proctored midterm exam between April 26 and April 28, and proctored final exam between June 7 and June 9. **Note that you will need to use the Respondus Lockdown Browser to take the midterm exam and the final exam.** Policies on proctored exams can be found at <http://www.cdm.depaul.edu/onlinelearning/pages/exams.aspx>.

Make-up exams will not be given. If you wish to petition for a make-up exam, you must notify me at least one week in advance and provide documented evidence of the emergency that will cause you to miss the exam. Failure to contact me in advance of the exam date and time will disqualify you from being allowed to take a make-up exam.

Lateness and absence

No late homework, quiz, or lab will be accepted. If you don't hand in a homework/quiz/lab in time, you will receive 0 points for the homework/quiz/lab.

Changes to syllabus

This syllabus is subject to change as necessary during the quarter. If a change occurs, it will be thoroughly addressed during class, posted under Announcements in D2L and sent via email.

Online course evaluations

Evaluations are a way for students to provide valuable feedback regarding their instructor and the course. Detailed feedback will enable the instructor to continuously tailor teaching methods and course content to meet the learning goals of the course and the academic needs of the students. They are a requirement of the course and are key to continue to provide you with the highest quality of teaching. The evaluations are anonymous; the instructor and administration do not track who entered what responses. A program is used to check if the student completed the evaluations, but the evaluation is completely separate from the student's identity. Since 100% participation is our goal, students are sent periodic reminders over three weeks. Students do not receive reminders once they complete the evaluation. Students complete the evaluation online in Campus Connect:

<http://campusconnect.depaul.edu/>

Academic integrity and plagiarism

This course will be subject to the university's academic integrity policy. More information can be found at <http://academicintegrity.depaul.edu/>.

Academic policies

All students are required to manage their class schedules each term in accordance with the deadlines for enrolling and withdrawing as indicated in the University Academic Calendar. Information on enrollment, withdrawal, grading and incompletes can be found at: <http://cdm.depaul.edu/enrollment>.

Incomplete grades

An incomplete grade is a special, temporary grade that may be assigned by an instructor when unforeseeable circumstances prevent a student from completing course requirements by the end of the term and when otherwise the student had a record of satisfactory progress in the course. All incomplete requests must be approved by the instructor of the course and a CDM Associate Dean. Only exceptions cases will receive such approval. Information about the Incomplete Grades policy can be found at

<http://www.cdm.depaul.edu/Current%20Students/Pages/Grading-Policies.aspx>

Students with disabilities

Students who feel they may need an accommodation based on the impact of a disability should contact the instructor privately to discuss their specific needs. All discussions will remain confidential. To ensure that you receive the most appropriate accommodation based on your needs, contact the instructor as early as possible in the quarter (preferably within the first week of class), and make sure that you have contacted the Center for Students with Disabilities (CSD) at: csd@depaul.edu. Lewis Center 1420, 25 East Jackson Blvd. Phone number: (312)362-8002 Fax: (312)362-6544 TTY: (773)325.7296
